

Internship Opportunities – Lockheedmartin

For those interested in internships or early career opportunities, highlighting your degree, relevant coursework, and any projects that enhance your understanding of your field of study is key. We also advise against strong leadership language in your resume, as it may inadvertently suggest overqualification for an internship. On the other hand, if you are seeking an experienced professional position, feel free to emphasize your relevant technical skills and incorporate some strong leadership language, as it aligns well with these opportunities.

We appreciate your interest in joining our team and look forward to potentially working together. Please complete the survey linked below, and don't hesitate to reach out if you have any questions.
